GDP = gross domestic product, mm = millimitres, OECD = Organisation for Econoomic Co-operation and Development.
Armed conflict was defined as ≥25 conflict-related deaths in a calendar year. GDP per capita was scaled up by a factor of 1,000. Population density represents the proportion of a population living with a density of at least 1,000 people/km^2. Age dependency ratio represents the number of dependents (individuals under 15 years or over 64 years of age) per 100 working-age individuals. Male education represents age-standardised years per capita. Rainfall was scaled down by a factor of 1,000.
